

CLAIMS

What is claimed is:

1. A table comprising:

a table top;

a frame secured to the table top, the frame including a first side rail and a second side rail;

a first bracket include one end pivotally connected to the first side rail of the frame;

a first leg connected to an opposing end of the first bracket, the first leg movable between an extended position and a collapsed position relative to the table top;

a second bracket include one end pivotally connected to the first side rail of the frame;

a second leg connected to an opposing end of the second bracket, the second leg movable between an extended position and a collapsed position relative to the table top;

a third bracket include one end pivotally connected to the second side rail of the frame;

a third leg connected to an opposing end of the third bracket, the third leg movable between an extended position and a collapsed position relative to the table top;

a fourth bracket include one end pivotally connected to the second side rail of the frame; and

a fourth leg connected to an opposing end of the fourth bracket, the fourth leg movable between an extended position and a collapsed position relative to the table top.

2. The table as in Claim 1 wherein the first side rail is rotatably connected to the table top and the second side rail is rotatably connected to the table top.

3. The table as in Claim 1, further comprising a first crossbar interconnecting the first bracket and the second bracket; and further comprising a second crossbar interconnecting the third bracket and the fourth bracket.

4. The table as in Claim 1, further comprising a first crossbar interconnecting the first side rail and the second side rail; and further comprising a second crossbar interconnecting the first side rail and the second side rail.

5. The table as in Claim 1, further comprising a drawer attached to the table top.

6. The table as in Claim 5, wherein the first leg, the second leg, the third leg and the fourth leg are sized and configured to be disposed about the drawer when the legs are in the collapsed position.

7. The table as in Claim 1, further comprising a locking pin configured to secure the first leg member in an extended position.

8. The table as in Claim 1, wherein the first bracket is attached to a portion of the first side rail that is spaced apart from an end of the first side rail and wherein the first leg is generally aligned with the end of the first side rail when the first leg is in the extended position.

9. The table as in Claim 1, wherein the first bracket is generally aligned with the first side rail when the first leg is in the extended position and the first bracket is disposed at an angle relative to the first side rail when the first leg is in the collapsed position.

10. The table as in Claim 1, wherein the first leg is generally parallel to and spaced apart from the first side rail when the first leg is in the collapsed position.

11. The table as in Claim 1, further comprising a first link connecting the first leg to the opposing end of the first bracket; further comprising a second link connecting the second leg to the opposing end of the second bracket; further comprising a third link connecting the third leg to the opposing end of the third bracket; and further comprising a fourth link connecting the fourth leg to the opposing end of the fourth bracket.

12. The table as in Claim 11, further comprising a first pin that is inserted through an opening in the first bracket to secure the first leg in the extended position; further comprising a second pin that is inserted through an opening in the second bracket to secure the second leg in the extended position; further comprising a third pin

that is inserted through an opening in the third bracket to secure the third leg in the extended position; and further comprising a fourth pin that is inserted through an opening in the fourth bracket to secure the fourth leg in the extended position.

13. The table as in Claim 1, further comprising one or more clips that attach the first side rail and the second side rail to the table top.

14. The table as in Claim 1, further comprising a first crossbar that interconnects the first side rail and the second side rail; and further comprising a second crossbar that interconnects the first side rail and the second side rail .

15. The table as in Claim 14, further comprising one or more clips that attach the first crossbar and the second crossbar to the table top.

16. The table as in Claim 1, wherein the first bracket can be pivoted relative to the table top to allow the first leg to be moved between the extended position and the collapsed position; and wherein the first bracket can be rotated relative to the table top to allow the first leg to be moved between a first position in which the first leg is spaced apart from an lower surface of the table top and a second position in which the first leg is positioned generally adjacent to the lower surface of the table top.

17. The table as in Claim 1, wherein the first side rail can be rotated relative to the table top to allow the first leg to be spaced apart from a lower surface of the table

top and to allow the first leg to be positioned generally proximate the lower surface of the table top.

18. The table as in Claim 17, further comprising a lever that may be used to secure the first side rail in a fixed position.

19. The table as in Claim 17, further comprising a knob that may be used to secure the first side rail in a fixed position.
